

Download Mononucleosis And Other Infectious Diseases

Infectious mononucleosis; Other names: Glandular fever, Pfeiffer's disease, Filatov's disease, kissing disease: Swollen lymph nodes in the neck of a person with infectious mononucleosis

Infectious Mononucleosis and Other Epstein-Barr Virus-Related Disorders Thomas G. Gross Epstein-Barr virus (EBV) infects the majority of human individuals but usually results in subclinical infections. EBV has been etiologically linked to a wide spectrum of human disease, but it has been shown to be the etiologic agent in relatively few. Major differences from infectious mononucleosis. Most other signs and lab abnormalities are not present (e.g., AST/ALT elevation, splenomegaly).

Adenovirus Infection Overview. Known for causing respiratory tract infections and conjunctivitis in immunocompetent hosts (especially children), as well as hemorrhagic cystitis, pneumonitis, and colitis in immunocompromised hosts. In addition, it can ...
