

# Download Outer Planet Entry Heating And Thermal Protection

Atmospheric entry is the movement of an object from outer space into and through the gases of an atmosphere of a planet, dwarf planet, or natural satellite. A heat shield is a part of an object designed to protect the object from overheating by dissipating, reflecting or simply absorbing the heat. The term is most often used in reference to exhaust heat management and to systems for dissipation of heat due to friction. The image on the left shows two containers with a white/grey CO<sub>2</sub> deposition, that is the liquid, jelly-like, CO<sub>2</sub>. On top is water. The third tube contains a solution of CH<sub>4</sub>, with at the bottom a green-blueish CH<sub>4</sub> deposition. PLANET X PASSAGE IN CATHOLIC PROPHECY. The seven years of tribulation and the Three Days of Darkness are now imminent courtesy of the arrival of the Nemesis-Nibiru system.
